## $\mathrm{E}_{\mathbf{z}}$ component of TM Modes of a Cylindrical Waveguide, by Dr. Colton Physics 442, Summer 2016

```
ln[1]:= uam [ }\mp@subsup{\alpha}{_}{\prime},\mp@subsup{m}{-}{}]=\operatorname{BesselJZero[ }\alpha,\textrm{m}]
ln[2]:= f01[ X_, Y_] = BesselJ[0, Sqrt[x^^2+ y^ 2] uam[0, 1]]//N
    Plot3D[f01[x, y], {x, -1, 1}, {y, -1, 1},
        RegionFunction }->\mathrm{ Function[{x, Y, z}, 怔^2+ Y^^2< 1]]
```

$\operatorname{Out}[2]=\operatorname{BesselJ}\left[0 ., 2.40483 \sqrt{x^{2}+y^{2}}\right]$

$\ln [4]:=\mathrm{f0} 2\left[\mathrm{X}_{-}, Y_{-}\right]=\operatorname{Bessel} \mathrm{J}\left[0, \operatorname{Sqrt}\left[\mathrm{x}^{\wedge} 2+\mathrm{y}^{\wedge} 2\right] \operatorname{uam}[0,2]\right] / / \mathrm{N}$ Plot3D[f02[x, y], $\{x,-1,1\},\{y,-1,1\}$, RegionFunction $\rightarrow$ Function $\left.\left[\{x, Y, z\}, x^{\wedge} 2+y^{\wedge} 2<1\right]\right]$

Out[4] $=$ BesselJ $\left[0 ., 5.52008 \sqrt{x^{2}+y^{2}}\right]$

This is $E z=J_{0}\left(\frac{u_{01} s}{R}\right)$, with $R=1$ and $s=\sqrt{x^{2}+y^{2}}$.

Out[12] $=\operatorname{Bessel} J\left[1 ., 7.01559 \sqrt{x^{2}+y^{2}}\right] \operatorname{Cos}[\operatorname{Arg}[x+(0 .+1$. i) y]]

This is $E z=J_{1}\left(\frac{u_{11} s}{R}\right) \cos \phi$. It's the first mode with $\phi$ dependence. I used the "Arg" function as a trick to get $\phi$.
Often we say $\phi=\tan ^{-1}\left(\frac{y}{x}\right)$, but the $\tan ^{-1}$ function has problems in the $2^{\text {nd }}$ and $3^{\text {rd }}$ quadrants. Arg (the polar angle of a complex number) doesn't suffer from those issues.
